PURPOSE AND CONTENT

This program is designed to provide attendees current information on how to recognize symptoms and use current data to establish diagnosis and formulate the appropriate treatment plans for the management of gastrointestinal diseases. Several topics will be presented at a live, one day symposium through lectures and question and answer sessions by experts in the field of gastroenterology. This course is designed for gastroenterologists, GI surgeons, internists, family practice physicians, nurse practitioners, physician assistants, and nurses with an interest in gastroenterology and hepatology.

EDUCATIONAL OBJECTIVES

Upon completion of this activity, participants should be able to:

- *Apply the new goals of 'treat to target' for management of patients with IBD. Describe symptoms and care for patients with complex IBD*
- *Identify the etiology of diarrhea cause by medications and commonly ingested foods.*
- *Distinguish between the types of commonly seen pancreatic cysts, understand which cysts need surveillance, and when surgical intervention should be considered.*
- *Discuss how to reduce risk of cancer in Barrett's esophagus, premalignant conditions of the pancreas, and for patients with a family history of cancer or inherited genetic syndrome.*
- *Explain the indications, uses, and contraindications for novel treatments in upper and lower GI bleeding.*
- *Describe the different types of bariatric surgery and endoscopic treatments for weight loss*
- *Explain the potential complications and nutrition issues that can occur with bariatric surgery.*

TARGET AUDIENCE

This course is designed for providers in the specialties of Gastroenterology and Hepatology, Internal Medicine, Family Practice, colorectal surgery and oncological surgery.
